Google Chrome, as the name suggests, is Google's web browser. It is designed for Android devices and for many it is the default browser because it is simple, fast and has many features available in the desktop version. On Google Chrome you will find the Google search engine and the layouts of the cards and easy access to the bookmarks, the elements you can find in Google Chrome for your desktop. This application also has some features that make the use on your Android device easier, such as Windows switching with a finger. Google Chrome offers interesting features such as rapid navigation with faster pages, the display and navigation of the private browser from Omnibox and the addition of bookmarks and the synchronization of open cards between the browser and Android. This means that you will be able to send the content you have looked at your computer, on Android only with Google Account. Google Chrome is one of the best mobile navigation alternatives for Android operating systems. If you use Chrome on your computer and you have Android devices, of course it is practically unchanged. But otherwise, or it is not a feature you are most interested in, it is still a great way to surf the web. Download Google Chrome APK here. The translation of Andrés López controlled of the Uptownwnn Location Team requires Android 7.0 or higher to download and install Google Chrome on your Android device, just identify the last APK on the Uptownwnnwnwand website, where you can also find previous versions of the app. Google Chrome's latest update is available on Uptownwnn, in which the latest APK file will automatically download the directory. You can also find all the previous versions of the app. To update Google Chrome, just download the latest version from Uptonow, where you can also find all the previous versions of the app. Google Chrome has about 120 MB, so you don't need much space to download and install the app on Android.
