## Assessment in the Affective Domain

The affective domain is a part of a system that was published in 1965 for identifying understanding and addressing how people learn. This describes learning objectives that emphasize a feeling tone, an emotion, or a degree of acceptance or rejection. It is far more difficult domain to objectively analyze and assess since affective objectives vary from simple attention to selected phenomena to complex but internally consistent qualities of character and conscience. Nevertheless, much of the educative process needs to deal with assessment and measurement of students' abilities in this domain.
