Instructerables is a community for people who like to do things. Come explore, share and make your next project with us! Instructerables is a community for people who like to do things. Come explore, share and make your next project with us! Windows asks for a password when the computer is started? It should. If a password is not required to access your account, you are leaving completely open to anyone else in your home or workplace, such as your email account, saved files, etc. Assuming that you have not configured Windows to automatically log in, chances you simply do not have a password set to your Windows account. You need to fix this by creating a password now. You can make one of the control panel. Once you have, you should use it to log on to Windows from the point in front. That is, unless you at some point remove your Windows password. The specific steps you need to follow to create a Windows logon password differ slightly depending on the operating system you are using. See which verses of windows do I have? If you are not sure which of these versions of Windows is installed on your computer. Open control panel. The easiest way to do this in Windows 10 is running the control from the Start menu or run the dialog box. In Windows 8, use use the power user menu by pressing Win + X. Select User Accounts (Windows 10) or User Accounts and Family Security (Windows 8). If you are viewing the applets for your icons instead of category display in Windows 10, you will go to step 4 after choosing users' accounts. If you are in Windows 8 in this vision, you will not see this option; Open the user accounts, and then jump to step 4. Open the user accounts. Choose Make Changes in My Account in the PC Settings. Select the login options from the left. In the password area, choose Add. Enter the new password on the first two text fields. You have to do this twice to secure the password correctly. In the Tip Password field, enter something that will help you remember the password should forget, and then select Advance. Click Finish to complete the new password configuration. Now you can leave any window that you opened to make the password, such as PC configurations or settings. Open control panel on the Start menu. Select User Accounts and Family Security (Windows 7) or User Accounts (Windows Vista). If you do not see this link when creating or resetting your password in Windows 7, it is because you are using the control panel in a display that only shows only icons or links to the applets, and this Nã It is included. Open the user accounts and then go to step 4. Choose the user accounts. In the area do changes in your user account area, select Create a password for your account. Enter the password you want to use in the first two text boxes. Enter something useful in the text box enter a password tip. This step is optional, but we highly recommend that you use. If you try to log in to Windows, but insert the wrong password, this tip will appear, we hope to run your memory. Choose Create Password to confirm your new password. Now you can close any Open you used to reach the page to change the password. Navigate to start> Control Panel. Choose User Accounts. If you are on the control panel category vision, you will need to select it again in the next screen. Select your user name in the area or choose an account to change the area. Choose the Create a password link. In the first two text boxes, enter the password you would like to get to use. Choose Create Create To confirm your new password. The next screen can ask, you want to make your files and private folders?. If other user accounts will be configured on this PC and you would like to keep your personal personal files, select Yes, Private Make. If you are not worried about this type of security or this account is the only account on your PC, you can choose no. Now you can close the User Accounts window and the Control Panel window. Thanks for letting us know! Tell us why! You can reset your Windows 8 password with the "hack" described below. While it is harmless and works very well, it is not exactly sanctioned by Microsoft. Ideally, you would use a Windows 8 password reset disk to reset your Windows 8 password. Unfortunately, the only way to use one of these is if you had the premeditation to create one before Forget your password! We recommend that you do one as soon as you return (see step 10 below). The Windows 8 password redefinition trick only works only if you are using a local account. If you use an e-mail address to log in to Windows 8, you are not using a local account. If so, follow ours how to redefine your Microsoft password tutor. LifeWire / Derek Abella You can reset your Windows 8 password in this way, you do not matter the edition of Windows 8 or Windows 8.1, you are using. The process can take to an hour. Access the advanced initialization options. In Windows 8, all major diagnostic and repair options available for you can be found in the Advanced Initialization Options menu (ASO). There are six ways to access the ASO menu, all described in the link above, but some (METHER 1, 2, and 3) are only available if you can already enter windows 8 and / or know your password. We recommend following the following 4-month, requiring you have a Windows 8 configuration disc or flash drive or 5, which requires you to have or create a recovery unit of the Windows 8. The all 6 is also works, if your computer supports it. Select troubleshooting and then advanced options and finally the command prompt. If you are prompted for user password (which you do not know), you will have to abandon this step and initialize a program that allows you to continue these steps. Hiren's bootcd is an example of a solution. Enter the following command at the command prompt: Copy C: \ Windows \ System32 \ Utilman.exe C: \ ... and then press Enter. You should see a confirmation of 1 copied file (s). If you have a "path not found" or similar error when trying to run this command or any others on this page, it is more likely because the drive letter is changed by using the command prompt in this way, And the system can not find what you are typing. Experience the dir command D: and see if it shows the Windows file system, if so, use D in place of C, or (although improbable átil) try again with and and so on. Now enter this command, again followed by Enter: Copy C: \ Windows \ System32 \ Cmd.exe C: \ Windows \ System32 \ utilman.exe response with y or yes to question about the superscript of the utilman.exe file. Now you should see another file copy confirmation. This command is a single line with two spaces; Do not press Enter until it is finished with the entire command. Remove any flash drive or discs that you may have initialized in step 1 and restart the computer. To restart the ASO menu, exit the command prompt and choose Turn off the PC. Press the ON / OFF button when you are turned off to turn it on again. When the Windows 8 login screen is available, choose ease of access to the access icon in the lower left corner of the screen. The command prompt must be opened. The command prompt is open because the changes made in step 3 and 4 above The access facility tools with command prompt (do not worry, you will revert these changes in step 11). Now that you have access to a command line, you can reset your Windows 8 password. Then you need to run the net user command, as shown below, replacing myUsername by your user name and myNewPassword with the password that you would like to get to use: User Net MyUsername MyNewPassword for to The usuÁrio jon can run the command like this: NET UsuÁrio JON PA $$ w0rd The message Success with concluÁdo aparecerÁ¡ command if you typed the command using the correct syntax. You need to use double citaÁ§Áµes around your username if it happens to have a space in it, such as "Tim Fisher" or "Gary Wright". If you receive a message saying that the user name does not be found, run the liquid user to see the list of Windows 8 users on the computer for reference and try again with a Volid User. The message system error 8646 / The system is not authoritative for the specified account indicates that you are using a Microsoft account to log in to Windows 8, not a local account. See important call in the Á£ introduÁ§Á the top of this page for more on this. Promises the command prompt. Do the login with the new password that you set in step 7! Now that your password has been reset Windows 8 and you is back, create a disc Á£ redefiniÁ§Á the password of Windows 8 or switch your local account to a Microsoft account. NÁ£ o matter what you choose, you will have finally legÁtimo and much easier to use, Using Option Á£ redefiniÁ§Á the password of Windows 8. Finally, you should reverse the hack that makes this work Á£ redefiniÁ§Á the password in Windows 8. to do this, repeat steps 1 and 2 above. Once the command prompt is open again, run this command: C: \ utilman.exe C: \ Windows \ System32 \ utilman.exe Confirm Á£ sobrescriÁ§Á the answering yes and restart the computer. Although in the Á£ exigÁªncia there that you reverse these mudanÁ§as would irresponsÁ¡vel suggest that you do the Á£. And if you need access to the ease of access from the login screen someday? Beyond © m addition, please know that undo these mudanÁ§as nÁ£ mudanÁ§a the undo your password, Enta Á£ Á£ the sampler not worry about it. Your password should now be reset. Thanks for letting us know! Tell us why! why!
