While there's no vaccine for chronic hepatitis C, treatments that are available today offer a 95% cure rate. Chronic hepatitis C can significantly affect how your liver works. There are three primary types of hepatitis, and while their symptoms can be similar, they vary largely in the ways they're transmitted. 1. Just as financial aid is available for students who attend traditional schools, online students are eligible for the same - provided that the school they attend is accredited. Hepatitis C occurs more commonly in people who engage in intravenous drug use. Hepatitis A causes a short-term, acute sickness that most people heal from without treatment. Is online school a good idea? Online degrees are relatively new in higher education, and still evolving. While doctors can't treat hepatitis A with medication, people who get this virus can manage its symptoms with fluids, rest and good nutrition. Hepatitis B can be transmitted through sexual activity and exposure to infected blood. Generally, any accredited degree offered by an institution of higher education certified as such within in a major country will be recognized as a valid degree. This form of hepatitis causes a chronic illness in over 50% of people who get this type of the virus. Is financial aid available? Hepatitis C can spread through unprotected sexual intercourse, but this is a less common way to transmit it. Chronic hepatitis often has few symptoms in its early stages, so recognizing the associated dangers and getting tested if you've been exposed may save your life. It can cause cirrhosis, which means that your normal liver tissue is replaced with scar tissue. There's also a safe and effective vaccine available to protect you against hepatitis A. What is Hepatitis B? Hepatitis B can occur both acutely (meaning it develops quickly and lasts a short time) and chronically (meaning it develops slowly over time and worsens over months or years). However, it can turn into a chronic condition that lasts for years; this is more likely in older adults. It's the least transmissible of the three viruses and can spread through contact with infected blood. According to the Centers for Disease Control and Prevention, up to 2 million people in the United States are chronically affected with hepatitis B.
