The best Android hacking apps are one of the most popular Google requests. Currently, every geek wants to turn their Android smartphone into a hacking device. But many don't know where to start or what to install. Today, we are going to list several excellent hacking tools so that hacking on Android is possible. Despite the big hackers using these Android apps to turn their smartphones into full hack machines. Everyone thinks that hacking is possible using just a computer, but technology has improved and now smartphones can do anything like your PC. Hackers often use Linux-based operating systems for hacking on a computer. And your Android is also a Linux platform. A collection of the best hacking apps for Android. After a few studies, we have compiled a collection of the best Android hacking apps. You no longer need to install a hacking OS on your PC, otherwise you can use these Android hacking tools to do some exploits through your smartphone. So download and try these hacking apps for Android and also remember that your device must be hacked to use the full potential of these apps. First, I'll list Android Hacking apps available on the PlayStore, then tools from an external source. Note. For educational purposes only, the applications mentioned in the list are for educational purposes only. Do not try to use it if it is not legal in your country. And don't use them to harm anyone or gain unauthorized access to an account you don't own. Use this software only to analyze your own security. I am not responsible for anything you do using this app. It will be used at your own risk. 1. The Orbot app is mandatory for anonymity on the internet. Orbot is an Android application developed by the TOR project to guarantee freedom and privacy on the Internet. In fact, it allows you to hide your real IP address by routing your messages through a distributed network of relays controlled by volunteers around the world. named devices). Orbot APK includes not only TOR but also Libevent and Light-Pieuvre Proxy Server. Fing is the best ultra-fast network scanner completely free, which determines which devices are connected to any Wi-Fi network, compares devices, detects attackers, evaluates network security risks, helps network and finds best performance, network and Best Network in Network. The best hack apps for android is one of the most searched queries on google. Nowadays, every maniac wants to customize his android smartphone with a hacker device. But most of them don't know where to start or install. So, today we are going to share some great hacking tools to activate Android Hack. However, major pirates use these applications during Android hacking to convert smartphones so that they fully work like hacking machines. Everyone thinks that hacking is possible only through a computer, but technology has developed, now smartphones can do everything like a computer. Typically, pirates use Linux operating systems on PCs for hacking purposes. Your Android is also a Linux based platform. Collection of the best Android hacking apps: After some research, here is a collection of the best Android hacking apps. Now you no longer need to install certain hack operating systems on your computer using your smartphone. Download and try these Android jailbreak apps and remember that your device must be rooted to get the most out of these apps. Here I will first mention the android jailbreak apps available in the PlayStore and then the external source material tools. NOTE. For educational purposes only, the application list is for educational purposes only. Do not attempt to use it if it is not legal in your country. And don't use them to hurt them or gain unauthorized access to an account you don't have. Use this software only for your security analysis. I take no responsibility for anything you do using this app. To use your own risk. 1. Orbot, the main application to become anonymous on the Internet. Orbot is an Android app developed by Project Tor for online freedom and privacy. Essentially, it allows you to hide your real IP address by relaying your messages through a distributed network of relays run by volunteers around the world. It is also capable of going through all TCP traffic from an Android device (Lit only (appliance only)). Orbot APK is not only a footprint, but also contains Libevent and Light Proxy Web Server., All the more high, completely free and Ultra-Fast Network Scanner to find out which devices are connected to any Wi-Fi network, MAP devices, detect intruders, assess network security risks, solve network problems and get the best network results through troubleshooting. The most popular network tool set in the world. With over a dozen free network tools, including: Wi-Fi scanner, port scanner, DNS search, ping and service monitor, Fing is an indispensable network tool. 3. Haven: Keep Watch Haven is intended for people who need a way to protect their personal space and property without exposing their privacy. It is an Android application that uses device sensors for monitoring and protecting physical spaces. Haven turns any Android phone into a motion sensor, sound, vibration and light that follows unexpected guests and unwanted intruders. 4. DECRYPTO DECRYPTO is an Android application that allows you to encrypt a message and convert it to a illegible format. It can be further deciphered to the format readable using the same application. Over 25 traditional ciphers have been implemented, such as Caesar code, ASCII code and the Vigenere code. For a better understanding, an explanation and a short history of all types of encryption were given. 5. Whats Web Scan If you are wondering how to hack the WhatsApp account and monitor all incoming and outgoing news from someone who knows. In that case, you should try Whats Web Scan, an internet application for WhatsApp. To hack WhatsApp with this application, you must first get physical access to the victim's device, and then scan its online QR WhatsApp code to activate the service. Unlike other hacker programs on Android, Whats Web Scan does not require the authorization of a super-hugger, because the application uses the original method of accessing WhatsApp (via the WhatsApp website). 6. Photo Exif Editor Photo Exif Editor allows you to view, modify and delete photos - exif data. You can also move the image as you want. Photo Exif Editor is a photo location changer, photo reader with GPS and photo location editor. 7. DRIVEDROID Thanks to Drivedroid, you can unlock any computer/laptop protected by a password, simply connecting a phone with Android via USB. Drivedroid allows you to run a computer from ISO/IMG files saved in the phone. Ideal to read Linux distributions or have a recovery system, wherever you are ... without the need to burn different CDs or USB memory. Drivedroid also contains a useful start menu in which you can download USB images of various operating systems from the phone (e.g. Mint, Ubuntu, Fedor, OpenSuse and Arch Linux). Currently, about 35 different systems are available. Thanks to pixelknot, only your friends can unlock your special message using a secret password. Otherwise, you will see a beautiful picture. This is an interesting and simple way to share hidden messages that no one will know about. The network card allows you to scan the network, act as a network analyzer and find not only all connected, but also information about what is connected, what services each computer performs and much more. It supports a wide range of scanning methods, including UDP, TCP Connect, TCP SYN (half-open) and FTP. The network card also includes additional functions, such as the detection of the operating system (OS). 10. Check WPA WPS WiFi want to find out if your access point for the WPS protocol is vulnerable? WiFi WPS WPA Test is a mandatory application. You can check the connection of the access point using the WPS PIN code using this application. 11. MAC Mac Mac or Mac Mac modes at airports, cafes or hotels these days in almost all public places there are free Wi-Fi. However, most of them use the terms to control use. However, change the Android Mac address to solve this problem. With this tool, you can easily hack the MAC address of your device and use free unlimited Wi-Fi. IP Tools + Security is a large set of tools that will help you understand the configuration of your network, any potential problems, network availability and network performance. 13. Netman Netman comes with powerful professional network tools oriented to performance, accuracy and simplicity. Some of the tools in this application are a real-time telephony monitoring schedule, real-time network information, real-time monitoring charts in real time. 14. Terux Terux combines a powerful emulation of the terminal with a large collection of Linux packages. With Terux, you can use the advantages of the Bash and ZSH shells, change the files using Nano and VIM, develop C using Clang, a powerful application that allows you to launch an SSH / SFTP server on your Android phone with a full-functional terminal in this area. Client, FTP client, SFTP client, Telnet Terminal Deverse with SSH SSH Maintenance Manager. 16. Choose the best option to get rid of the need to view websites or other remote resources in search of a new version or updated information. The program has three options: a universal version of notes for the convenience of service, Site Monitor for expanded monitoring in detailed mode with the option Exactly what you're looking for and real-time monitoring background services for all your tedious real-time jobs. We will update other Android Hacker apps from PlayStore soon. Learn more about other tools on third party sites. However, we are not sure about the authenticity of some download sources, so the links are listed separately at the end of the article. 17. Kali Linux Nethunter With Kali Nethunter, from the creators of the powerful Kali Linux hacking operating system, you have a powerful, portable and low-cost platform for penetration testing. Nethunter has all the performance of Kali and supports 802.11 wireless frame injection, Mana Evil Hotspot configuration with a click, HID keyboard (keyboard attacks against computers enabled) and bathroom attacks. 18. WPS Connect WPS Connect helps you hack WPS enabled WLANs. The program focuses on the controller if the router is sensitive to the standard PIN code. Many routers that are deployed by enterprises have weak points in this sense. With this app you can check if your router is sensitive or not and act accordingly. 19. Sbrdroid SSHdroid is an Android SSH server implementation. With this program, you can connect to your device from a computer and perform controls (such as Terminal and ADB-Shell) or edit files (via SFTP, WinSCP, Cyberduck, etc.). 20. Helper Helper Market is an Android tool that helps users to replace/simulate their gerotic devices on another device. It can turn your Nexus 7 into a Samsung Galaxy S3 in seconds. Didn't require a reboot. You can also easily install incompatible or restricted apps for countries with this app. / Swing for the server. If you do this tool correctly, you can access the following information from the target Android device: Call contacts (and all your information), vibrate the phone, call call logs, open URLs in a standard browser, receive all messages, SEN, SEN SMS, Send GPS / network position, Brindisi, Monitor received direct messages, video broadcast (for the client only based on activity), live monitoring of the phone status (called received, called correspondent, called Lost ..), take a photo of the LA camera ... etc. 22. WiFi Kill WiFi Kill is one of the best WiFi hacking apps for Android: UsedTurn off another Wi-Fi connection from Android.
