The practitioners claim that they have healing powers, but there is no scientific basis for this claim.[1][2][3] Crystal healing practitioners believe they can increase low energy, prevent negative energy, release blocked energy, and transform the aura of a body.

[4] In one way, the operator places the crystals on different parts of the body, often corresponding to the chakras; or, the operator places the crystals around the body in an attempt to build an energy grid, which is supposed to surround the client with healing energy. Scientific investigations have found no evidence of such "energy networks", nor is there any evidence that crystals healing has a greater effect on the body than any other placebo. Although this practice is popular, it encourages the commercial demand for crystals, which can cause environmental damage and exploitation of child labor to extract them.[5] History Origins In Plato's account of Atlantis, crystal healing is also mentioned. According to Plato, the Atlanteans used crystals to read the mind and transmit thoughts.[6] The first historical record of crystals dates back to ancient Sumerians (ca. 4500 à c. 2000 BC). Sumerians used crystals in their magic formulas.[7][8] Writings dating back to 400 B.C. comment on the powers that the various crystals could emit.[9] Often, if a negative incident occurs, a specific stone is used in an attempt to neutralize the negative effect.[9] This was done by wearing amulets or other talismans around the neck with specific stones.[9] The origins of crystals healing can be traced back to Ancient Egypt and Mesopotamia, India, Ancient Greece or Ancient Rome[9]. The ancient Egyptians extracted crystals and used them to make jewelry. Crystals or precious stones were also used in practice, for their metaphysical properties. In particular, they used crystals as aids for health and protection. They often buried a lapis lazuli beetle with their deceased, believing that it would protect them there.[10] Also, in ancient Egypt, amulets were used to ensure the well-being of the individual.[11] Shape, decoration, inscription, colour, material, or texture of the beetle. [11] Amulets were worn or placed on the body in the form of stones, piercings, rings, necklaces or other jewellery.[11] The Egyptians used amulets to benefit their afterlife, often representing an Egyptian deity and their specific powers. Amulets were also placed on mummies or between the mummy's bandages, with funerary pieces usually larger than those worn by the living.[11] In funeral practices, they also used headrest amulets. Life-size headrests placed in tombs to protect the dead, have also symbolized the rise and rebirth of the dead, and the sun rising between two hills, which resurrection and rebirth.[11] The ancient Greeks assigned a multitude of properties to crystals. The word "crystal" comes from the Greek word "κρῖλλᾶζταλλος" which means "ice".[12] The ancient Greeks believed that transparent quartz crystals were a frozen water to the point where they remained in its solid form.[13] The word "amethyst" in the Greek word "amethyst" in the Ancient Greek means "do not intoxicate". Amethyst was worn as an amulet believed to help hangover or prevent intoxication[10]. Precious stones have been conceived as objects that can help healing "in a practice known as lapidary medicine" by different cultures[14]. The Hopi Native Americans of Arizona use quartz crystals to help diagnose disease.[15] Both Pliny the Elder and Galen claimed that some crystals had medicinal properties. In Europe, the belief in the healing powers of crystals (and particularly crystal amulets) persisted until the Middle Ages.[16][17] The presumed medicinal properties of gemstones, as well as other powers believed to possess, were collected in texts known as lapidaries, which remained popular in medieval and modern Europe until the 17th century. Across cultures, different stones can symbolize or provide help for different things. One example is pink quartz. In Egypt, it was believed that pink quartz could prevent aging, but the Romans used pink quartz as a seal to indicate property, whereas in the Middle Ages it was used in healing potions, today pink quartz is known as the "Love Stone" and is used to balance emotions. [18] Introduction to the New Age Movement The healing of New Age crystals is linked to three cultures: British, Indian, and Native American.[9] British culture has a pagan history that has inspired many people who practice modern witchcraft.[9] Indian culture uses crystals healing. As a holistic form of healing, it is written in the sacred texts of Indian culture.[9] New Age healing in the Western world has ties with the British, and more specifically with paganism.[9] While many people may not want to practice animal sacrifice, modern practices have simplified many ancient rituals and practices, making them more [9] Western astrology is also used with crystals, and is linked to modern paganism.[9] Practitioners believe that some stones align with certain planets and share property with them.[9] Using astrological birth cards, someone can also use types of astrological In Hindu Vedic texts, particularly the Garuda Purana and the Gṛaha-gocara, there is much information about the importance of crystals in Indian culture.[9] In these texts, Hindu demigods induce the Vala learns that the semi-deaths are not faking and the semi-deaths dismember Vala, whose parts of the body are transformed into gem seeds that aretalismanic powers, made more powerful the purer the gem.[9] Vedic crystal practices are still alive in modern India and are used by both older and younger generations.[9] Tibetan refugees practicing Buddhism used crystals in meditation as malas, or prayer beads, and many other people in Indian culture still use crystals healing when modern medicine does not work or is unattainable.[9] Native American culture and crystals healing have been passed down from generation to generation through word of mouth, because of this many traditions and secrets have been lost, because of the extinction of many indigenous languages[9]. In native cultures there are two important principles when it comes to crystal healing, meditation and respect. Meditation varies from person to person, but it usually includes good thoughts and a healthy mindset when handling crystals.[9] In Native American culture, crystals are considered an entity and you have to show respect for stones, you can also show respect for crystals through respect for the Earth.[9] Native traditions can use crystals by wearing them to benefit from healing vibrations, one at a time or more but the stones must never touch each other, or you can make dyes with the stone and water and then administer them internally.[9] Contemporary use New Age In the English-speaking world, crystals healing is strongly associated with movement. Spiritual New Age: "the New Age middle class healing activity par excellence".[14] Unlike other forms of complementary and alternative medicine (CAM), crystal healing participants see the practice as "identified",[19] dependent on extreme personalization and creative expression. [14][20] Crystals healing professionals claim that certain physical properties, such as shape, colour and marks, determine the disorders a stone can heal.In commonly used texts[20], Paradoxically, practitioners also believe that crystals do not have intrinsic qualities, but that, instead, their quality changes according to both participants.[20] After selecting the stones for colour or for their perceived metaphysical qualities, they place them on body parts.[1] Colour selection and placement of the stones Stones are made according to concepts of grounding, chakras, or energy grids. Crystalline healing is often present in jewelry today and is used side by side with yoga, meditation or awareness.[9] People often turn to crystalline healing when they are dissatisfied with modern medicine and are trying to revive the cultural traditions of older generations[9]. Today the use of crystalline healing is typically used by middle- and upper-class individuals, because they have time and resources to look for this kind of alternative medicine. Richer people are also able to afford better quality crystals.[9] Using Crystals in the New Age Movement Aligning the chakras, where stones are placed on one, multiple or all seven chakras simultaneously[9] simultaneously[9] where crystals are usually placed in a geometric configuration around the meditator[9] Mindfulness Yoga Sales and Industry Worldwide, retail sales of crystals were estimated to be over \$1 trillion a year in 2019.[5][21] India, China, Brazil and Madagascar are the main producers of crystals.[5] In Madagascar, one of the sources of crystals, most crystals are mined in unsafe, non-industrial or "homemade" mines, with parents and children working together to dig the crystals from shafts and shoveled tunnels.[5] Miners are paid between 17 and 23 cents per kilogram for pink quartz (less than a penny per ounce).[5] Miners' income can be only 0.1% of the final retail price.[5] Some people in the industry say that miners' low pay is due to the fact that customers in developed countries want low retail prices; others say this is due to developed country shops wanting to make them more profitable.[5][21] Scientific Evaluation There is no peer-reviewed scientific evidence to show that crystals healing has any effect; It is considered a pseudoscience.[1][22] In addition, there is no scientific basis for the concepts of chakras, "blocked", energy networks requiring grounding, or other similar terms; they are generally understood as simple terms used by adherents to lend credibility to their practices. Energy, as a scientific term, is a very well-defined, easily measurable concept and little resemblance to the esoteric concept of energy used by crystals healing advocates[23]. In 1999, researchers French and Williams conducted a study to study the power of crystals compared to placebo. Eighty volunteers were invited to meditate with a quartz crystal or a placebo stone indistinguishable from quartz. Many of the participants reported experiencing the typical "crystalline effects", regardless of whether the crystals were real or placebo. In 2001, Christopher French, head of the Anomalistic Psychology Research Unit at the University of London, and colleagues at Goldsmiths College outlined their study of crystals healing at the British Psychological Society Centenary Annual Conference, concluding: "There is no evidence that crystals healing works beyond the limits of [3] The healing effects of crystals can also be attributed to cognitive impairment (which occurs when believers want the practice to be true and only see things that support that desire).[24] Crystals healing techniques are also practiced on animals, although some veterinary organizations, such as the British Veterinary Association, have shown that there is a lack of understanding of the effects, warn that such methods are not scientifically proven and say that people consult a veterinarian before using alternative techniques[25]. Crystal Healing Supporters and 5G Conspiracy Theorists have falsely supported the pseudo-scientific and disinformation belief that shungite can 5G radiazione.[26][27][29][30] Vedi anche Colore guarigione Energia medicina Magnet terapia Elenco di argomenti caratterizzati come pseudoscienza Referenze ^ a b c Regal, Brian.
