Perkins braille repair manual pdf

Perkins braille repair manual download. Perkins braille repair manual pdf.

Sometimes you buy a used car and it's missing the car repair service manual. Please handle your braille with care. They could include a limited accessories manual, partial parts diagrams or factory manuals for only a few years.eBayTry eBay. This should be a free search service. Your braille is thoroughly oiled at the factory. Only non-oxidizing oil should be used. It is especially important to pack the ends well so that the paper feed knobs are at least two inches from the sides of the box. Make sure the embossing head is still on the paper, as it may catch on the edge if it is too far to the right. Doing so engages the line spacing mechanism and positions the top margin correctly. Do not pull the levers toward you unless the paper is completely rolled out. Twist the knob clockwise to tighten it wherever you want it to be set. Turn the paper feed knobs toward you a little, then away until they stop turning. If you roll a sheet out of the braille and reinsert it using the method discussed above, text should be aligned within five thousandths of an inch, which is fine for most practical purposes. The paper should almost touch the paper guide knob, and should be inserted about half an inch. The more you roll the paper back and forth, the more noticeable the creeping becomes. Pull the paper release levers toward you as far as they will go. It is recommended that you set your machine up in this way and use heavyweight paper until you are comfortable inserting paper. Notebook or copy paper should not be used because it could easily tear and get caught in the paper rolling mechanism. The serial number is on a metal sticker on the front of the braille, directly below the spacebar. If there is an obvious structural problem with your new braille, return the machine for a replacement. If the holes are too far to the right, they will trigger the sensor, and the rollers will stop, preventing you from rolling the paper into the braille. Removing Paper You can remove paper from the braille by either pressing the line spacing key repeatedly until it stops moving the paper, or by turning the paper feed knobs away from you until they will not turn. Paper thicker than this will not fit easily between the rollers. This unit will continue to emboss paper up to 11 1/2 inches wide by 14 inches long; emboss 25 lines of up to 42 cells when using 11 1/2 inch wide paper; have a durable baked enamel finish for easy cleaning; and have a tough aluminum frame. Lightweight braille paper or any other paper that is relatively stiff (approximately 60 pound weight) is fine. For a one-inch margin, slide it all the way to the left. Paper Guide Knob This small, rough knob is located on the back of the braille in a slot in the top left corner. In addition to the APH Light-Touch Perkins Braille®, APH sells other braille-related products. Be sure to keep the carton in which the braille was shipped to you. If you do not release all keys, the carriage may not advance properly along the line. First produced in 1951, the Perkins Braille now has a worldwide reputation for its quality and reliability. If the backspace key is depressed even slightly while other keys are pressed, all the keys may become locked. Returning the Braille for Repair Please do not attempt to take the braille apart unless you have been trained to do so and have all the proper tools. The bell is fixed to the right margin stop and rings seven cells before the end of the line. For a half-inch left margin, position the paper guide knob all the way to the right. Initially, you may wish to roll a blank sheet of braille paper in and out of the machine a few times to absorb any excess oil remaining inside. Enter the year, model and make of your vehicle to find the right one. To release them, move the carriage slightly to the left by pressing down on the backspace key or by pulling back gently on the carriage lever. Heavyweight paper is also easier to insert than lightweight paper or paper with bent corners. It also will not hold braille dots well. The braille has a top-of-paper sensor designed to prevent you from rolling paper too far into the machine. The eBay marketplace carries vehicle manuals. The amount of creeping also depends on the thickness and stiffness of the paper you are using. The plate under the embossing head provides a hard surface for manually erasing the dot. To meet the needs of the students and teachers we serve, APH has added a few new features: One-third less pressure is required to depress keys. Though hard, this surface will chip if knocked about. The keys, knobs, and carriage lever are made of hard plastic. If you move to the left of the spacebar, you will find the keys for dots 1, 2, and 3, then the line spacing key at the far left. This process will prevent any oil spots from appearing on your first pages of braille. These characteristics continue to keep it in production and in high demand today. Note that if you need to both add and erase dots in the same character, it is best to add dots first, braille in a cell where you have previously erased dots may push them up again. You can move the carriage by means of the carriage lever, which is on a narrow shelf above the keys. Current relevant U.S. Postal Service standards are available at online. Remove the top Styrofoam insert at each end of the braille. You can use either or both levers. If the carriage sticks or is sluggish as it moves across a line, the paper probably was not inserted correctly. Once you have rolled the paper out all the way, pull the paper release levers toward you and remove the paper. The bottom roller is coated with rubber and rotates when you turn the paper feed knobs. Before setting margins, insert a piece of paper of the width you plan to use into the braille. Do not yank or roughly pull paper out of the machine by force. Paper Rollers There are two rollers that extend from left to right on the back top portion of the machine; they are used to roll the paper in and out of the machine. Press the line spacing key once (this is the key on the far left of the machine). Turn one or both paper feed knobs toward you. Once you find it, print it from the library's printer. You don't have to have a YouTube account or passwords to access the public videos.Third-Party WebsitesOther third-party websites have vehicle manuals available. The embossing head will move only when the carriage lever is pressed down or when keys are pressed. U.S. Postal Service standards will allow the sender to pay for additional insurance on brailles shipped as "Free Matter for the Blind or Handicapped." Once your braille is received, a repair technician will examine your machine, identify problems and make necessary repairs. Keys There are nine keys across the front of the APH Light-Touch Perkins Braille®. Try to keep the braille from getting jostled, and do not check it as baggage if at all possible. The frame is finished in exclusive APH blue. Slide the paper left and right a little to make sure it is as far in as it will go, then slide it all the way to the left. APH Light-Touch Perkins Braille® Product Number 1-00815-00 APH and Perkins welcome you to the APH Light-Touch Perkins Braille®. The spacing between the line you just finished and the one you braille after reinserting the paper may not be quite right, so if exact spacing is important, you may need to start over on a fresh sheet of paper. By pinching the flat and rounded portions of the margin stops together, you can release the margin, allowing it to slide to the left or right. Braille Tips When the paper is rolled in, you have pressed the line spacing key once, and the carriage is at the far left, you are ready to start braille. Though the braille is designed to withstand corrosion, try not to expose it to excessive dampness. Some are free vehicle repair manuals and others require an online payment before you can access them.Car Manufacturer WebsitesFactory car manuals are available on many car manufacturer websites. The rubber on the bottom of the machine and in the paper feed roller could degrade. The paper may come out the front slot of the braille as you try to roll it in if the knobs are not in the correct position. It is very important to keep the braille covered when it is not in use to keep dust and dirt out of the machine. Remove the rubber bands. The top margin will vary depending on the length of the paper you are using. To ensure that the carriage will begin braille at the left margin, it is recommended that you pull the carriage lever all the way back to the left. Enclosed with the braille are two sheets of paper. Inserting Paper It is easiest to insert paper if the paper guide knob, the left margin stop, and the carriage are as far to the left as they can go. Avoid roughly slamming the carriage lever to the left, as this can damage the embossing head. Oiling should be done by a trained braille repair technician; otherwise, your braille may be permanently damaged or made inoperable. If you move to the right of the spacebar, you will find the keys for dots 4, 5, and 6, then the backspace key at the far right. When packing up your braille, please do the following to protect it during shipping: Do not send the dust cover or carrying case with the braille. Paper Release Levers There are two levers, one at each end of the braille on the top surface, near the back. You'll have a printing fee, but it's usually a nominal charge. Download the manual and print if you want a hard copy. Care and Storage When you are not using your APH Light-Touch Perkins Braille®, push the paper release levers away from you, and cover it with the dust cover. For your convenience, the content of this manual is available online at www.aph.org/manuals/index.html in print and braille. Dust combines with oil to form an abrasive paste which can damage the machine over time. The APH Light-Touch Perkins Braille® is designed so that once you apply a certain amount of pressure to the keys, extra pressure will not make the dots bigger. It keeps all of the great features of the classic Perkins Braille but adds several enhancements that you, our customers, have requested. The paper should not move if you tug on it gently from either end; it is clamped into the machine. Slide it under the embossing head and between the rollers. MORE FROM QUESTIONSANSWERED.NET Please read this manual before using the braille. Remove the plastic wrap covering the braille. Search on the website for the make, model and year of your vehicle. This is particularly important with pre-punched paper because the holes need to be less than 19/32 of an inch from the left margin. If the paper feed knobs will not turn, the paper was not inserted correctly; repeat steps 1 through 7. It is a good idea to move the carriage across the line after setting the margins to be sure they are set correctly. For more timely support, phone or e-mail communications are preferred. Keep turning the knobs toward you until you cannot turn them any farther. AMERICAN PRINTING HOUSE FOR THE BLINDCustomer Service1839 Frankfort AvenueLouisville, KY, USA 40206Telephone: 502-895-2405Toll Free: 800-223-1839Email: cs@aph.org Perkins Solutions175 North Beacon StreetWatertown, MA, USA 02472Telephone: 617-972-7308Toll Free: 855-206-8353Email: Solutions@Perkins.org Staff will assist you to either solve the problem or make arrangements for returning your braille. To set the left margin stop, move the embossing head one cell to the left of where you would like each line to begin. The braille is made of aluminum, with enamel baked on to protect it. Correcting Braille Errors If you want to correct errors on a page, it is best to correct them as you go, or to finish braille on the page, erase any unwanted dots, then reinsert the page and work through it, adding necessary dots in the order you find the errors. To facilitate processing of your braille, also write "Braille writer returned for repairs" on the box. If you twist the knob counterclockwise to loosen it, you can slide it back and forth in the slot, which is one-half inch wide. Over time, glue from these labels can build up on the rollers and embossing pins. If you find a dot you need to erase on the current line, move the carriage so the embossing head is one or two spaces to the right of the character. If this should happen, maintenance by a trained repair technician is recommended. If there is a problem using the braille, you can contact APH or Perkins Solutions. It is possible to make adjustments to your braille to accommodate non-standard paper weights. In the box, you will find a plastic bag containing: Dust cover Wooden braille eraser Getting Started The APH Light-Touch Perkins Braille® is guaranteed for one year against defective materials and workmanship. They are used to secure the paper in place before rolling it into the braille. Whatever the reason, it's possible to find car repair manuals online. Hold the paper in place with one hand and push the paper release lever as far away from you as it will go with your other hand. It is acceptable, though, if the plate under the embossing head is visible at the right edge of the paper. Labels can also peel off in the braille and adhere to the rollers or other parts of the machine. The dots on the bottom sheet will be sharper than normal, but both copies should be readable. You can then slide the carriage to any position on the line. Carriage, Carriage Lever, and Embossing Head The carriage moves the embossing head across the paper, braille as it moves from left to right. This lifts the metal roller so you can insert the paper. Be sure to follow a licensed mechanic's advice over an amateur to be certain you're getting a professional's instructions. One contains only braille and shows the results of a quality control and embossing test; the other is a reminder in print and braille to put the dust cover on the APH Light-Touch Perkins Braille® when it is not being used. Send the braille to: AMERICAN PRINTING HOUSE FOR THE BLIND1839 Frankfort AvenueLouisville, KY 40206 Perkins Solutions175 North Beacon StreetWatertown, MA 02472 If you are mailing your braille from within the U.S., write "Free Matter for the Blind or Handicapped" in the upper right corner of the address side of the box. This allows you to send it without postage, in accordance with Free Matter for the Blind, Public Law 87-793. Try to press all the keys for a particular character at the same time. Try not to drop your braille. See the Inserting and Removing Paper section for more information. You'll find owner's manuals for current models as well as those dating back several years for older cars. The clamp that holds the paper will not engage properly unless the paper feed knobs are in this position. The prices vary and shipping usually takes a few days to receive the hard copy. The Perkins Braille is viewed by many as the premier mechanical braille writer in the world. This should be done by a trained braille repair technician. Finish the line, then roll the paper out and reinsert it. Machine Layout and Basic Functions Throughout this section, the assumption is being made that the braille is in front of you with the keys toward you. You will probably need both hands to do this, one at each edge of the paper. When you are braille, the right end of the lever points upward. Contact APH or Perkins Solutions for guidance if you experience poor performance or poor quality of braille. Pinch and slide the left margin stop to the right until it will not move and release it. If you move one lever, forward or back, the other moves as well. You should also use the far left position for paper 11 1/2 inches wide, if you plan to punch binding holes in the paper, or if you are using pre-punched paper. If you have the original packing material, pack the braille as you received it. The video demonstrations provide online guides with step-by-step instructions for vehicle repairs and maintenance. These oftentimes require that you register on the website or you have to set up a monthly or yearly subscription before you can receive any information. It can accommodate up to one sheet of heavyweight braille paper, which is 7/1000 thick (or between 60 and 100 pound weight measurement), or the same thickness as two sheets of newspaper. The braille will make a slight clicking noise as the carriage moves, but this does not harm the machine. If you press one key a little after the others, it may stick or jam. Do not leave the braille in long places such as on a radiator or in direct sunlight. Let go of the paper. When you have brailled as much as you want on a line, press the line spacing key and pull the carriage back to the left margin. American Printing Housefor the Blind, Inc.1839 Frankfort AvenueP.O. Box 6085Louisville, Kentucky 402061-800-223-1839www.aph.orgCatalog # 1-00815-00 The manufacturer manuals are usually the most comprehensive guides available online.If you're looking for a parts manual or a specific type of maintenance, check YouTube. Put one hand on each end of the braille below the paper feed knobs and lift it from the box. The braille has over 350 unique parts that are very small, and these parts must be placed exactly in the correct location for proper operation of the machine. It has an unusual cup shape designed to comfortably hold one to three fingertips. Put the braille in a large, strong box and pack crumpled newspaper around it. Though it is designed to withstand normal wear and tear and deliver years of service, it is a precision machine which can be dam- aged by a fall. The light gray keys provide contrast against the blue frame. For over 150 years, APH has promoted the independence of blind and visually impaired persons by providing specialized materials, products and services needed for education and life. The spacebar is in the middle. Using the carton is the easiest way to ship the braille back for repair. If it slides back to the right when you release it, the carriage lever may have gotten jammed slightly during shipping; press the right edge down and slide the carriage lever over to the right to release it. If you need to use a different sort of paper, try it first to determine if it will work. Miniature versions of manuals are found on some websites rather than complete manuals. Pinch and slide the right margin stop to the left until you cannot move it any farther, and then release it. There are rubber bands attaching the carriage lever (near the right end of the braille on the narrow shelf above the keys) to the right paper feed knob. If you need to make a copy of a document, it is possible to roll two pieces of lightweight braille paper into the braille at the same time. Inserting and Removing Braille Paper The APH Light-Touch Perkins Braille® is designed to use paper up to 11 1/2 inches wide and up to 14 inches long. Braille-related products include braille paper in a variety of weights and sizes; slates and styluses; and braille training tools and manuals. Unpacking Your APH Light-Touch Perkins Braille® Please note that this manual is also available online at www.aph.org/manuals/ in print and braille. Move the carriage all the way to the right and secure it there by putting several rubber bands around the carriage lever and over the right paper feed knob. They are used for rolling paper into and out of the machine. Jiggle it left and right a bit to make sure it clicks into place. To stop the carriage from moving, release the pressure and the carriage lever will return to the original position. Be sure to release all keys completely after braille each character. If you do need to return the braille, send a letter along with the machine describing the problem. Notice that the embossing head moves when you move the carriage lever. Compare the price and shipping options with other automobile websites to determine if eBay is the best way to go.Public LibrariesCall your public library to see if the library has access to free online automobile repair shop service manuals. This is because repeatedly rolling the paper back and forth can cause it to creep, or move out of alignment, so that the additional characters you braille are higher or lower than those already on the line, making correcting mistakes difficult. The dust cover is leatherette and has a slot in the top for the handle, in case you want to carry the braille while covered. The APH Light-Touch Perkins Braille, like the classic Perkins Braille, is extremely durable and produces high-quality braille. Or you might misplace the one you have. Push the paper release levers away from you as far as they will go. Be sure to include your contact information and the serial number of your machine. To move the carriage to the right, you can use the spacebar or gently press the carriage lever down to the right. The paper should then be rolled into the machine as far as it will go. If not, do the following: Wrap the machine in paper or plastic. Some manufacturers carry online vehicle manuals dating back to the 70s. (Whatever position works best for you is acceptable.) Try to keep any fingers not needed for braille a particular character out of the way of other keys, so that you do not inadvertently press keys or get unwanted dots in your writing. Do not use small packing material such as packing peanuts because these can get inside the machine and create problems. Note that if you braille all the way to the right margin, the keys will lock, and you will be unable to braille anything until you move the carriage back to the left. Paper Feed Knobs These knobs project out from the left and right sides of the braille, and each is about an inch across. Though durable, a sharp object can scratch them. Details and photos are available at the APH website and in our print catalog along with information on other APH products. APH and Perkins Solutions do NOT pay for shipping damage, so it is recommended that you insure your braille. The braille is thoroughly oiled at the factory with non-oxidizing oil, so you should not oil it yourself. APH Light-Touch Perkins Braille® Diagram Arrows on paper feeder knobs indicate direction for turning to locked position and for rolling paper out. The following tips should help you produce high-quality braille: The spacebar will move up and down when you press other keys; this is normal. The top roller is metal, with rubber O rings at intervals to hold the paper more securely in place. If you travel with your braille, use a carrying case if you have one. Rest the paper on the shelf below the embossing head. Exposing the machine to salt water and spilling liquid into it are particularly damaging. We realize the inconvenience of a broken machine and will repair and return your braille as soon as possible. Please be aware that the use of self-adhesive labels in the braille can cause difficulties. A soft-sided carrying case is available from Perkins Solutions and works especially well for transporting the machine or storing it when not in use. If they do, you'll have to go to the library and log-in with an account to search for your manual. You can do this with either or both hands. A consistent pressure when writing will ensure the evenness of your braille. The new ergonomic key design with extended levers increases comfort. For comfort, keep your fingers curved rather than extended straight when braille. Google what you're looking for and various sites will pop up on your computer screen. To position the right margin stop accurately, slide the carriage lever and embossing head to the position where you would like to set the right margin. If you are having minor difficulties with your braille, contact APH or Perkins Solutions to see if the problem can be solved without sending it in. Left and Right Margin Stops and Bell The left and right margin stops are located in a long slot on the back of the machine. (See the Machine Layout section below for more information about the carriage lever and paper feed knobs.) Gently pull the carriage lever back to the left.
